

STRESS

Talk Back to Your Unhelpful Thoughts

Stress comes from our perception of the situation. Technically, the actual situation is not stressful; it is our **PERCEPTION** that makes it stressful. Here are some common unhelpful patterns of thinking that we all have, as well as ways you can challenge these thoughts.

All-or-Nothing Thinking:

You see things in black-and-white categories. If your actions aren't perfect, then they are seen as a failure.

Challenge: Instead of thinking in an "either/or" way, try to think in shades of gray. Evaluate the situation on a scale of 0-10. Think again about partial success and reevaluate, on a scale of 0-10.

Filtering Out the Positive:

You focus on one thing that went wrong and filter out the positive events that occurred.

Challenge: Try to be as kind to yourself as you would be with a friend. Review the day's events, and focus on all of the positive things that went right. For every negative thing you think of, try to also focus on one positive thing.

Overgeneralization:

You see a single negative situation as never-ending and a "forever" pattern.

Challenge: Remind yourself that a single negative event (or even multiple events) doesn't mean it will truly last forever. Think of a specific time when a single negative event did not have a long lasting outcome.

STRESS

Talk Back to Your Unhelpful Thoughts II

Stress comes from our perception of the situation. Technically, the actual situation is not stressful; it is our **PERCEPTION** that makes it stressful. Here are some common unhelpful patterns of thinking that we all have, as well as ways you can challenge these thoughts.

Jumping to Conclusions:

You interpret something negatively even though you don't have all of the facts.

Challenge: Ask yourself, "Do I really know this to be true?" If the answer is no, focus on the things that you do know are true and on what information you still need.

Catastrophizing: You negatively exaggerate the importance of things.

Challenge: Try to take the event for what it is, and do not let your mind go astray.

Emotional Reasoning:

You assume that your negative emotions necessarily reflect the way things really are. "I feel it, therefore it **MUST** be true."

Challenge: Seek out the opinions of trusted friends or family to evaluate whether your thoughts are accurate.

"Should" Statements:

You try to motivate yourself by saying, "I should/shouldn't" do something.

Challenge: Think about the advantages and disadvantages of your thoughts, feelings, and/or

behaviors. Are you gaining anything from your thoughts or feelings? Discuss with a friend or family member to determine the accuracy of your thoughts.

Personalization: You see yourself as the cause of a negative event for which you were not entirely responsible.

Challenge: Carefully evaluate the situation to figure out if you really have any responsibility for the results. Identify outside factors that may be impacting the outcome.
